

ROLLER CONVEYOR

CREFORM Wide Conveyors

Flexible Material Handling on Your Demand

INFORMATION

Process-reliable material supply for all requirements – that is, what CREFORM – conveyors do. They guarantee a smooth and flexible transport of material that accommodates to the circumstances in your company.

Focus on an effective production.

The advantages of the CREFORM conveyors:

- **Multiple applicability**
- **Low tribological**
- **Consistent quality**
- **Reusability**

ROLLER CONVEYOR

Multiple Applicability

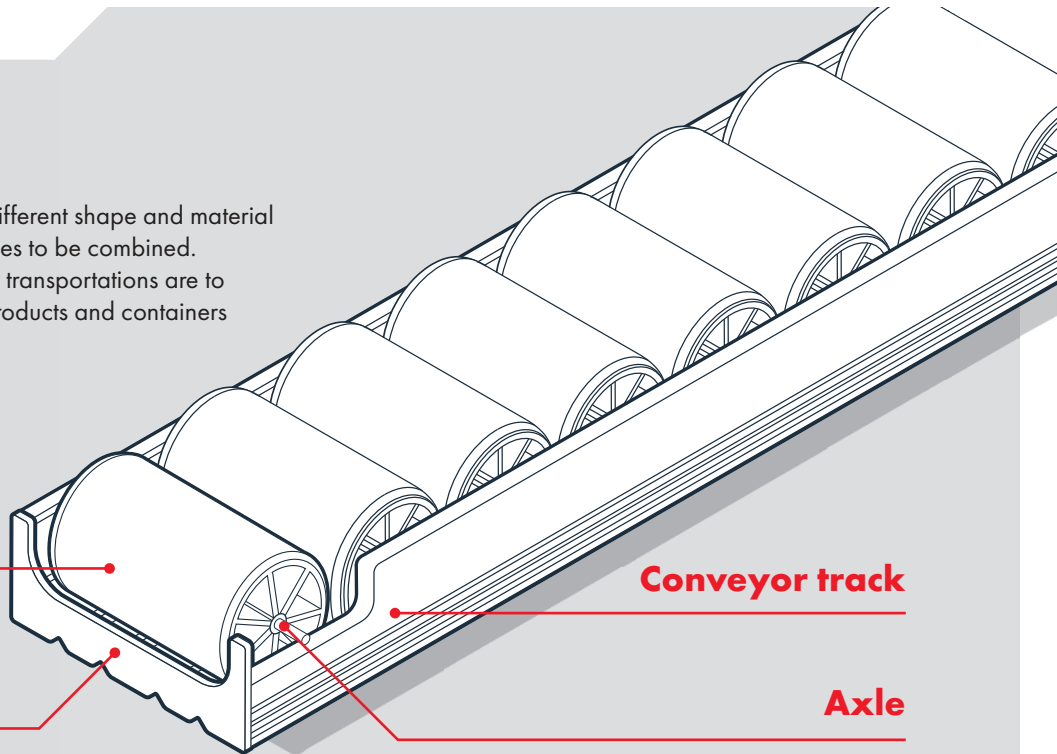

CREFORM wheels are available in different shape and material variations and offer a lot of possibilities to be combined. Because of their high stability difficult transportations are to realize very smooth. Big and small products and containers can be moved very slightly.

Wheel

Endcap

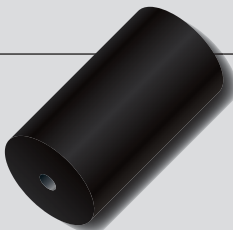

Conveyor track

Axle

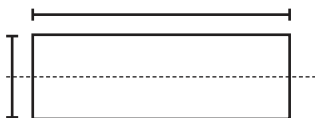

Shape of Wheels

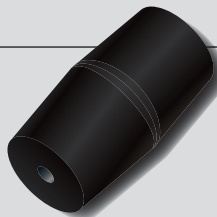

PWA

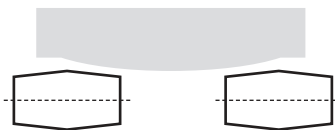

Wide cylindric PWA-plastic wheels are suitable for the transport of bid boxes and containers because of their high stability and resilience.

PWB

Because of their conical shape, the PWB-plastic wheels are perfect to transport deformed boxes or weak containers with an uneven surface.

PWC

The movement of small products without tray according to the Minomi-principle is to realize very easy with the small PWC-plastic wheels.

Material Selection of the Wheels

Because of the availability of white Polyethylene or black Polypropylene in ESD-version, the CREFORM wheels can be implemented flexible in every production - environment. Covered with stainless steel, the tribological in case of abrasive material can be reduced additional and the lifetime of the conveyor can be increased.

CREFORM conveyors show a high level of

- **Reliability**
- **Load capacity**
- **Abrasion resistance**

Modular Structure

Because of their modular design, the CREFORM conveyors can be disassembled into their single components very easy. This simplifies the assembly, eases the maintenance and offers a lot of possibilities for new configuration and re-use.

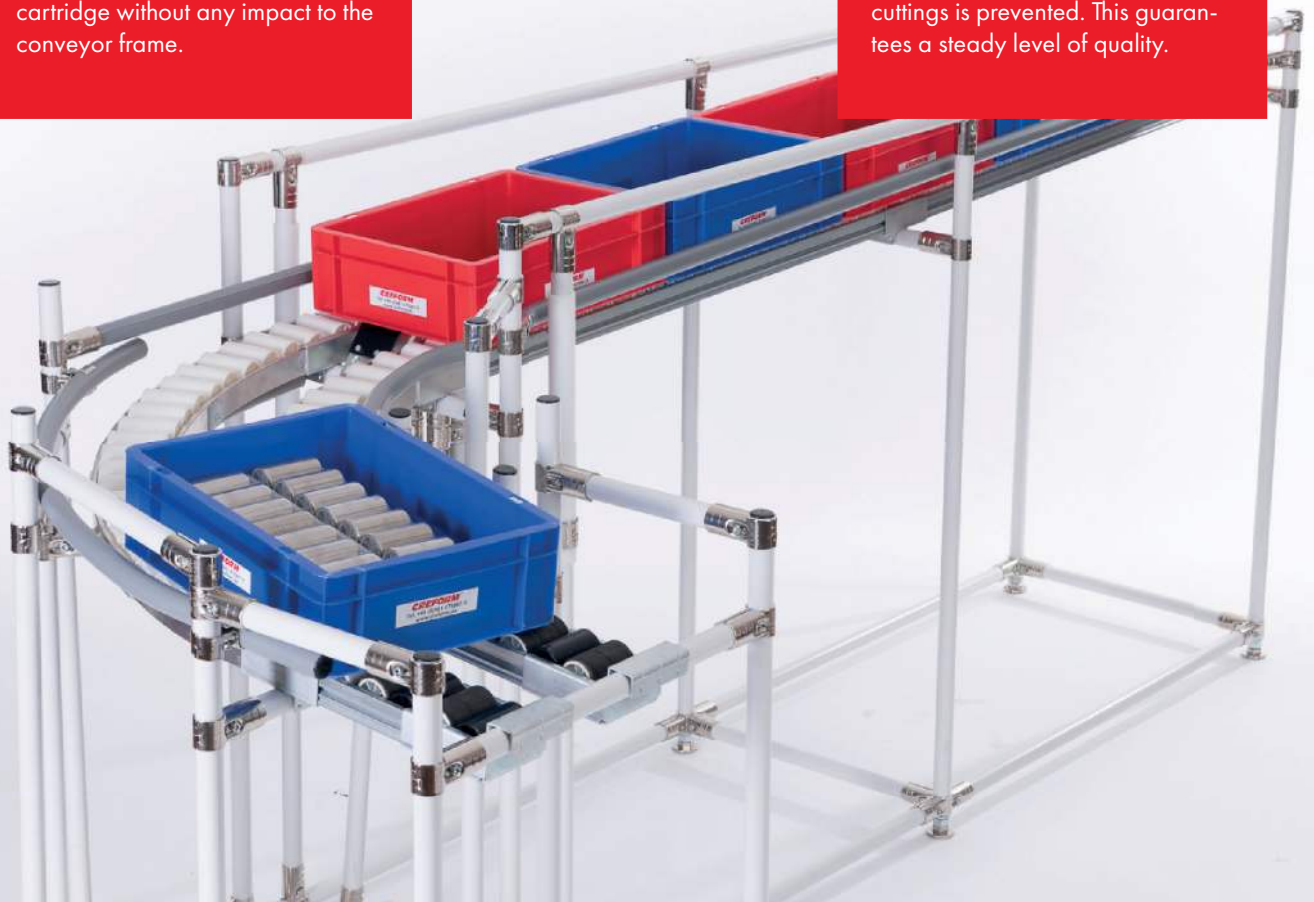

Easy Replacement

In case of partial damage, single wheel sets can be replaced like a cartridge without any impact to the conveyor frame.

Low Friction Between Plastic and Metal

Low friction between metal and wheel components ensures a smooth and low noise transport and reduces the tribological.

Because of no metal to metal contact, the initiation of metal cuttings is prevented. This guarantees a steady level of quality.

ROLLER CONVEYOR

The Optimal Solution for Any Requirement

Do you have a special challenge in your production that is not to solve with a conventional material handling system?

The complete compatibility to our CREFORM pipe and joint system and all aluminum profile systems offers all possibilities for your individual solution.
